

Countdown to Space User Manual

Introduction

Welcome to Countdown to Space! This application provides a fun way to countdown to various space-related events.

Features

- Countdown timers for space-themed events
- Informational messages for each event
- Visual representation of space images

Getting Started

1. Installation: No installation required. Simply run the provided Python script to launch the application.
2. Interface Overview: The application consists of two windows:
 - Window 1: Displays a countdown and buttons to progress through space-themed events.
 - Window 2: Displays space images.

Opening the Application:

- Go to the GitHub repository for the project.
- Click on the "Final project" folder.
- Download or clone all the files from that folder to your local machine.
- Open a terminal or command prompt.
- Navigate to the directory where the downloaded files are located.
- Run the following command: `python countdown_to_space.py`

Using the Application

1. Window 1:
 - Labels: Shows the countdown and event messages.
 - Buttons:
 - "Go to Space": Progresses to the next event and shows a message.
 - "Go into the ISS": Progresses to the International Space Station event.
 - "Go outside of Galaxy": Progresses to the outer space event.
 - "Exit": Closes the application.
2. Window 2:
 - Displays space images.

Troubleshooting

- If the application freezes or stops responding, close it using the "Exit" button and restart it.
